

BuyersStrike!

It Was Dark Over Westphalia

Who ELSE is Selling Cytodyne Stock Now? (CYDY)

After the bell today a Form 144 filing (get it [here](https://www.sec.gov/corpfin/form-144-email) (<https://www.sec.gov/corpfin/form-144-email>), in the April 30 link) was released concerning everybody's favorite pink sheet bioturd, Coronacrappier extraordinaire, Cytodyn (CYDY).

Yes, CEO Nader "The Nadir" Pourhassan sold 4.8mm shares on 30 April, while telling the world the amazing wonders of Cytodyn's ancient one time AIDS-then cancer-now-coronavirus drug. Said the company (<https://www.cytodyn.com/newsroom/press-releases/detail/424/cytodyn-reports-strong-results-from-eind-covid-19-patients>) that day:

CytoDyn Reports Strong Results from eIND COVID-19 Patients Treated with Leronlimab; Majority of Patients Have Demonstrated Remarkable Recoveries

April 30, 2020 6:00am EDT

Download as PDF

54 eINDs approved by FDA and 49 patients have been treated with leronlimab thus far

VANCOUVER, Washington, April 30, 2020 (GLOBE NEWSWIRE) -- CytoDyn Inc. (OTC:QB: CYDY), ("CytoDyn" or the "Company"), a late-stage biotechnology company developing leronlimab (PRO 140), a CCR5 antagonist with the potential for multiple therapeutic indications, today announced updates on 49 COVID-19 patients who have received leronlimab under the U.S. Food and Drug Administration's (FDA) emergency Investigational New Drug (eIND) program:

Eleven (11) Patients in NY hospital: All treated patients were in Intensive Care Units (ICU) because of acute respiratory failure, eight of whom were intubated (placed on mechanical ventilation). One patient was not intubated because of poor baseline pulmonary status (history of lung cancer and had undergone bilateral upper lobectomy). Seven patients were organ-transplant recipients (six patients were renal-transplant recipients and one patient had a history of heart transplant) and were on

Of course the [NEJM letter](https://www.nejm.org/doi/full/10.1056/NEJMc2011117?query=featured_coronavirus) (https://www.nejm.org/doi/full/10.1056/NEJMc2011117?query=featured_coronavirus), about those renal transplant patients shows the results of leronlimab were nothing short of, well, nothing.

The shares did see very strong stock promotion though. Strong enough for The Nadir to dump all that stock, that appears to be at zero basis. Nice work.

Can you provide a link to this SEC filing — it is not showing up in the SEC searches.

Did you bother clicking on the either one of the **two hyperlinks** in the blog post you just commented on which lead right to the filings? – Editor

A friend of mine has a relative who is a doctor at St. Elizabeth Hospital in Boston. He contracted virus and got intubated. After receiving Leronlimab, he recovered and got discharged. So this medication worked for Covid-19 patients.

[1. Glad to hear your freind's relative is healthy. 2. You are falling prey to one of the oldest tricks in the con artist playbook and a common flaw in thinking, the post hoc ergo propter hoc fallacy. 3. There is **no record** of St. Elizabeth's being part of any leronlimab **clinical trial**. Check for yourself [here](#) and [here](#) and the list of all of their Covid-19 trials with leronlimab (all 2 of them) [here](#). – Editor]

With an eIND program, investigational drugs can be provided to a patient regardless of the hospital they are in. There have been 75 eIND patients dosed with leronlimab.
